

RETROPERITONEAL SPACE AND PELVIS 5

You are supposed to learn about:

1. Development of male and female genitourinary system

In the dissection room:

2. Repeat all subjects related to abdomen, pelvis and retroperitoneum
3. Do your best to recognize all structures you learned about in X-Ray, CT, MRI, sonographic, angiographic images. Investigate the cross-sectional anatomy of the abdomen and pelvis.
4. Treat it as a repetition class. Remember that images acquired with various imaging modalities are part of your intermediate and final practical tests!
